DETAILED ACTION

Response to Election/Restrictions

1. Applicant's election of Group I, claims 1-10, in the reply filed on February 16, 2007 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

2. Claims 11-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention(s), there being no allowable generic or linking claim. Election was made without traverse in the reply filed on February 16, 2007.

Claim Rejections - 35 USC § 112 (Second Paragraph)

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "catalyst is present in the form of at least two catalytic zones" is unclear as to what applicants intend. Is this an apparatus limitation, which requires an upstream catalyst zone and downstream catalyst zone? Thus, renders the claim vague and indefinite.

Claim Rejections - 35 USC § 102(b)

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-7 & 9-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Shelef et al., “hereinafter Shelef”, (US Pat. 5,556,825).

Shelef discloses an automotive catalyst system, which comprises: a substrate; a gamma-alumina washcoat support material; a substantially atomic layer thickness of lanthana deposited on said alumina; a layer of oxygen storage material selected from the group consisting of ceria, praseodymia, and mixtures thereof deposited on said lanthana coating; and at least a partial layer of catalytic material selected from platinum, palladium, or mixtures thereof deposited on said oxygen storage material (see col. 12, claim 1). The system further includes catalytic material selected from the group consisting of rhodium, and rhodium and platinum, carried on zirconia deposited onto said substrate (see col. 12, claim 18). See entire reference for further details.

Shelef discloses a catalyst system having multi catalytic layers containing the claimed metal components and support material on the claimed substrate, thus the claims are anticipated by the reference.

There is no patentable distinction seen between the claimed catalyst and that disclosed by Shelef.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shelef et al., "hereinafter Shelef", (US Pat. 5,556,825).

Shelef discloses a catalyst system as described above, but silent with respect to the thickness of each catalytic layers.

It would have been *prima facie obvious* to one of ordinary skill in the art at the time the invention was made to have predetermined optimum thickness for each of said catalytic layers in order to achieve an effective catalyst system for treating automotive exhaust gases, in view of *In re Boesch*.

Conclusion

10. Claims 1-20 are pending. Claims 1-10 are rejected. Claims 11-20 are withdrawn due to nonelected (distinct) invention(s). No claims are allowed.
